

**PATIENT**

Savannah Delmont

PRESENTING CLINICAL SIGNS

Radiolucency more right distal femur episodic lameness
Abnormal PE/Chem/CBC/UA Results: Limping. Been on anti-inflammatory's. No improvement

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE PELVIS

A ventrodorsal projection of the pelvis is provided for review.

BREED

German Shepard

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

RADIOGRAPHIC DIAGNOSIS**SEX**

FS

- Normal pelvis and coxofemoral joints

AGE

7 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the pelvis presents without abnormalities, explaining the hind limb lameness. Rule out lameness originating from the distal aspects of the hind limbs or spine as well. No aggressive bone lesions are noted.
