

PATIENT

Cinder Read

PRESENTING CLINICAL SIGNS

History: Has been coughing and has been vomiting all day yesterday and all through the night. Has not been eating really but will drink water and then turn around and throw that up. Sherri doesn't know if Cinder got into anything. Ate a little on Tuesday morning.

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: PE: Looks pretty healthy. CBC: Hematocrit 55.2% RDW 14.3%
CHEM: BUN5 mg/dL

RADIOGRAPHIC STUDY OF THE ABDOMEN

BREED

Labrador Retriever
Mix

Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

Mild spondylosis formation is present along the cranial lumbar spine.

SEX

Spayed Female

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

AGE

6 Years 5 Months

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and is empty.

HOSPITAL NAME

Elizabeth AH

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

REFERRING VET

Kim Allyn, DVM

RADIOGRAPHIC DIAGNOSIS

- Mild spondylosis deformans
- Empty stomach
