

PATIENT PRESENTING CLINICAL SIGNS

Dr Sparky Schlusser History: Nasal discharge, crusting/flaking of nasal planum.
Abnormal PE/Chem/CBC/UA Results: Aside from the above, moderate periodontal disease

SPECIES COMPUTED TOMOGRAPHIC STUDY OF THE SKULL

Canine A high resolution pre- and post-contrast CT study of the skull is provided for review.

COMPUTED TOMOGRAPHIC FINDINGS

BREED

Miniature Schnauzer The tooth elements 208-210, 310, 311, 410 and 411 are absent. Triadan 108-110, 309, 403 and 405 present a moderate widening of the periodontal space.

SEX

In both nasal cavities, a moderate amount of non-contrast enhancing soft tissue material is attached to the nasal mucosal lining.

Neutered Male

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

AGE

14 Years

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The brain presents no deviation from normal anatomy and symmetry. The brain parenchyma is homogeneous and within normal limits for attenuation and distribution of contrast enhancement. The ventricular system is non-dilated and symmetric.

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation and contrast enhancement pattern is uniform.

HOSPITAL NAME

Mobile Pet Imaging

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Rhinitis
- Periodontal disease 108-110, 309, 403 and 405
- Multiple absent teeth

REFERRING VET

Dr. Meaux

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The computed tomographic findings are compatible with chronic non-specific rhinitis.

INVOICE

13737

Possible causes of the rhinitis/sinusitis can be either viral or immune-mediated (most common form would be lymphocytic-plasmacytic) rhinitis with bacterial superinfection. The changes noted are not typical of fungal rhinitis or a foreign body related rhinitis. There is no evidence of oronasal fistula formation, however complete dental workup appears beneficial to rule out dental disease as trigger for the rhinitis.
