

PATIENT PRESENTING CLINICAL SIGNS

Scotty Voorneveld

History: Right thoracic limb lameness noticed Nov 2021. Started on Onsior and physical therapy which seemed to slightly improve the lameness but not resolve it. Uncomfortable on stairs and is on reduced activity. On the orthopedic examination, discomfort on the right shoulder extension was noted. Hx MDR1 result: mutant/normal Orthopedic CT of right shoulder and elbow. 2 sites. Sternal position Sent Feb 3/22 @ 12:15

SPECIES

Canine

COMPUTED TOMOGRAPHIC STUDY OF THE FRONT LIMBS

BREED

Collie

A pre- and post-contrast CT study of the front limbs in a bone and soft tissue reconstruction is provided for review.

COMPUTED TOMOGRAPHIC FINDINGS

SEX

Male

The shoulder joints bilaterally present smooth osseous margins and without abnormalities of the surrounding soft tissue structures.

AGE

6 Months

The tip of the medial coronoid process of both elbow joints presents an irregular tip with a decreased density. In both elbow joints, the tip of the medial coronoid process is demarcated by an oblique fissure line, isolating an osseous fragment measuring 7 x 3 x 6 mm in the right elbow joint and a fragment measuring 3 x 2 x 3 mm in the left elbow joint. The periarticular bones of the right elbow joint present moderate osteophyte new bone formation.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

At the lateral aspect of the proximal metaphysis of the radius bilaterally, a small symmetric exostosis is seen.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Fragmented medial coronoid process (FCP) elbow joints bilaterally
- Mild degenerative osteoarthritis right elbow joint
- Structural normal shoulder joints

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The findings are consistent with mild chronic degenerative joint disease of the right elbow joints due to a fragmented medial coronoid process. The left elbow joint presents with FCP as well, without signs of degenerative joint disease.

REFERRING VET

Dr. Jeffery Biskup

Arthroscopy is recommended to revise the elbow joints and remove the fragments of the medial coronoid process and prevent further damage.
