BREED

Old English Sheep Dog

COMPUTED TOMOGRAPHIC FINDINGS

The serosal fat presents normal attenuation behavior. There is no evidence of peritoneal effusion or peritonitis.

SEX

Canine

Both kidneys present within normal limits for size, shape and organ architecture. After contrast administration a bilaterally symmetric and uniform nephro- and pyelogram is noted.

AGE

1

The adrenal glands are within normal limits for size, shape and organ architecture.

Both liver and spleen present with normal shape, even surface, uniformly attenuating parenchyma and homogeneous contrast enhancement, unremarkable.

The portal vein presents a normal order of its tributary veins and intrahepatic branching. No abnormal vessel is noted inside and outside of the liver parenchyma.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The pancreas is evenly contoured, the pancreatic parenchyma is homogeneous and presents uniform contrast enhancement.

The position, delineation, wall and content of the gastrointestinal tract are considered within normal limits throughout.

HOSPITAL NAME

Advanced Veterinary Imaging

The acetabular groove bilaterally is shallow, and the femoral heads bilaterally are luxated dorsally. The periarticular bones of the coxofemoral joints present mild to moderate osteophyte new bone formation.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Bilateral dorsal luxation of the femoral heads due to severe hip dysplasia

REFERRING VET

Eamon

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

An underlying cause for the described acute pain and pyrexia is not appreciated, but the chronic changes of the coxofemoral joints.
