

PATIENT

Benya Chevtcheno

PRESENTING CLINICAL SIGNS

P started coughing yesterday, owner worried. Has G2/6 murmur.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Radiographs of the thorax in three imaging planes are provided for review.

BREED

Shar Pei

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

M

The caudal contour of the cardiac silhouette is steep, no additional abnormalities of the cardiac silhouette are appreciated.. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

11

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

POCONO PEAK
VETERINARY
CENTER

RADIOGRAPHIC DIAGNOSIS

- Equivocal mild left sided cardiomegaly without signs of decompensation

REFERRING VET

Dr. Christine Coyle

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current radiographic study of the thorax presents without clinically relevant pathology, explaining the current cough. Be aware, that negative radiographs do not rule out possible bronchitis/tracheitis and that radiographic changes lack behind clinical signs. Recommend empirical management. If clinical signs deteriorate or are refractory to therapy, follow up radiographs can be used to reevaluate the thoracic structures.
