RADIOGRAPHIC STUDY OF THE THORAX

AGE

6 Years, 4 Months

Radiographs of the thorax in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

INTERPRETED BY

The body condition score is 6/9.

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

HOSPITAL NAME

DPC Veterinary Hospital

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

REFERRING VET

Dr. White

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Normal thorax

DATE

3-19-23

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax presents without abnormalities, the cardiovascular structures are considered normal. Given the heart murmur, a cardiac echo can be used to rule clinically relevant pathologies.

PATIENT

Hibby Gonzalez

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
