

PATIENT PRESENTING CLINICAL SIGNS

Harley Nickels Presented for increase seizure activity. P has been on phenobarbital 64mg BID and has had seizures well controlled. Starting in Nov 2021 P had 1 break through seizure. Last night P had 2, grand mal seizures that lasted approx 2-3 minutes. Owner does admit to forgetting 1 dose of phenobarbital prior to the seizure activity. O had Keppra on hand for cluster seizures, O gave Keppra after initial seizure, then P had another seizure. History of rickettsial disease prior to onset of seizures. Per O P had a mass diagnosed in kidney region invading vena cava found on AUS at specialty hosp. Surgery not performed as mass too invasive and P not good surgical candidate.

SPECIES Canine

BREED Abnormal PE/Chem/CBC/UA Results: QAR, mentation seems more dull than usual. Recent weight loss of almost 15lbs from September 2021. HR elevated for larger dog 160bpm, fair synch pulses. Intermittent panting but no crackles or wheezes appreciated. Liver chemistry and phenobarbital levels currently pending. Added on Keppra after apt today.

SEX RADIOGRAPHIC STUDY OF THE THORAX

MN Radiographs of the thorax in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

AGE The surrounding bony structures are within normal limits.

9.5 Years The extrathoracic soft tissues present homogeneous without abnormalities.

INTERPRETED BY The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

HOSPITAL NAME The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

Boca Park Animal Hospital

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

REFERRING VET The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

Ashman

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.
