

**PATIENT PRESENTING CLINICAL SIGNS**

Olly Martinez Chronic history of lameness , favoring the left front leg ,came for 2nd opinion  
Abnormal PE/Chem/CBC/UA Results: no obvious lameness except after put the left front leg on stress flexion for 2 minutes , no pain during palpation or abnormal articulation, last bloodwork was performed very recent and owner said was okay , 4DX Negative

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE SHOULDER & ELBOW JOINTS**

Radiographs of the shoulder and elbow joints are provided for review.

**BREED**

**RADIOGRAPHIC FINDINGS**

Golden Doodle Both shoulder joints present smooth osseous margins and the surrounding soft tissue structures are within normal limits.

**SEX**

New bone formation is seen at the proximal aspect of the anconeal process of both elbow joints. No additional abnormalities are appreciated.

Male Neutered

**RADIOGRAPHIC DIAGNOSIS**

**AGE**

7

- Mild degenerative osteoarthritis elbow joints bilaterally versus enthesophyte formation olecranon ligament
- Normal shoulder joints

**INTERPRETED BY**

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The mild osteophyte formation is suggestive for mild degenerative joint disease of both elbow joints that might be secondary to 'wear-and-tear' or is a sequela to elbow dysplasia. If pain can be elicited by pressure on the medial compartment of the elbow joints, workup might be complemented by a CT study of the elbow joints, allowing thorough assessment of the periarticular osseous structures.
