

**PATIENT**

Maui Snowball  
Danger

**PRESENTING CLINICAL SIGNS**

Vomiting - 10 times bile Not eating, drinking U/D OK NO C/S/D Not active Skinny Quiet in room

**RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN**

**SPECIES**

Feline

A complete set of radiographs of the thorax and abdomen is provided for review.

**RADIOGRAPHIC FINDINGS**

Thorax

**BREED**

Himalayan

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

**SEX**

Male

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**AGE**

1 Year

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**HOSPITAL NAME**

Animal Paradise  
Hospital

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

**REFERRING VET**

Dr. Kristen Hellwarth

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**INVOICE**

51091

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position and moderately distended. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**DATE**

3-22-22

The stomach is in its anticipated position and presents normal content.

**PATIENT**

Maui Snowball  
Danger

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**SPECIES**

Feline

**RADIOGRAPHIC DIAGNOSIS**

- Normal thorax
- Normal abdomen

**BREED**

Himalayan

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to empirical therapy, recommend follow up radiographs or a complete abdominal ultrasound examination; in some cases, a high ileus may lack classical radiographic signs of mechanical obstruction.

**SEX**

Male

**AGE**

1 Year

**INTERPRETED BY**
