PRESENTING CLINICAL SIGNS

- History: Unilateral (right) nasal discharge now progressed to blood. Had Bisolvon, antibs, preds and now changed from mucus to red blood. Previous vet suggested sinuses
- CHx of CKD IRIS stage 2
- Physical Examination/Findings:
 - No changes to nares / nasal planum, no LN enlarged. Marked tartar build up generally in mouth and 208 has marked gum recession. rest unremarkable
- Diagnosis:
- Concerned about polyp / tumour.

Abnormal PE/Chem/CBC/UA Results: Azotemia

COMPUTED TOMOGRAPHY OF THE NECK

A high resolution plain CT study of the neck is provided for review.

COMPUTED TOMOGRAPHIC FINDINGS

In the subcutaneous tissue at the left lateral aspect of C2, a well-defined, soft tissue attenuating nodule is seen.

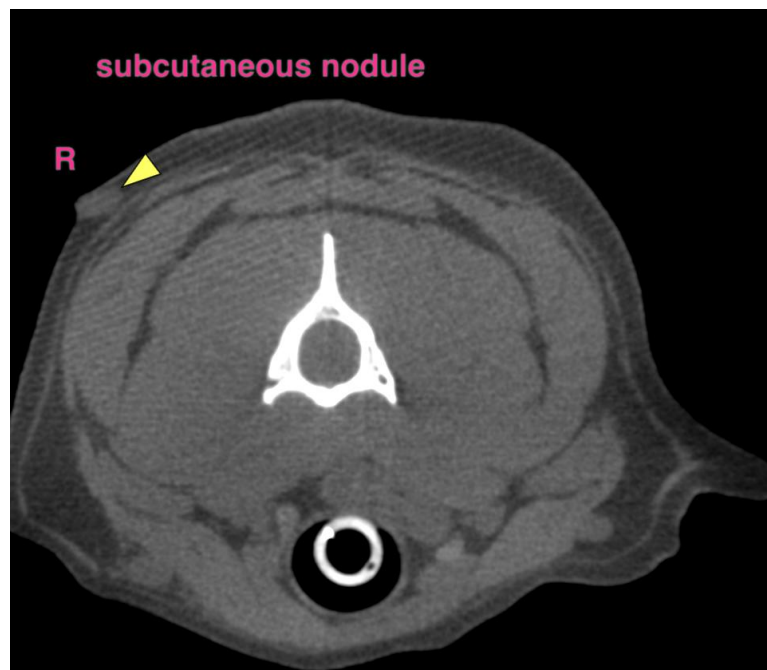

The osseous and surrounding soft tissue structures of the neck reveal no additional abnormalities. The thyroid glands present the expected size, shape and attenuation behavior.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Non-specific subcutaneous nodule level C2.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study of the neck reveals no clinically relevant abnormalities.
