No pain on palpation of limbs, normal flexion/extension present in all joints of all limbs. BCS 7/9 Neurological: Appropriate

SEX RADIOGRAPHIC STUDY OF THE THORAX

NM Radiographs of the thorax in three imaging planes are provided for review.

AGE RADIOGRAPHIC FINDINGS

4 Years, 4 Months The surrounding bony structures are within normal limits.

INTERPRETED BY The extrathoracic soft tissues present homogeneous without abnormalities.

Sebastian Schaub, DVM Dr. med. vet. DipECVDI The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

HOSPITAL NAME The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

DPC Veterinary Hospital Sporadic mild peribronchial cuffing is noted.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

REFERRING VET The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.
Dr. Oldenhoff

RADIOGRAPHIC DIAGNOSIS

- INVOICE**
- Mild bronchial pattern
 - No signs of air-trapping
- 51126

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE The mild bronchial pattern indicates bronchitis and both primary inflammatory non-infectious (e.g. feline bronchial disease, allergic) or infectious causes – viral, bacterial, parasitic – are considerations.
