

PATIENT

Killah Rittscher

PRESENTING CLINICAL SIGNS

Reason for Visit: Dropped off for spay. Owner mentioned in paperwork that she thinks pet has asthma. Called and Dr. Loduca recommended work up before putting pet under general anesthesia. Owner stated pet has never been to a vet. History: For about a month now Owner mentioned that when pet plays for about 2-4min she has to stop and she will pant and seem out of breath. Has happened several times. Owner has been trying some homeopathic things at home but stated she has not seen any difference.

RADIOGRAPHIC STUDY OF THE THORAX

SEX

F

Radiographs of the thorax in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

AGE

6 Months

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

HOSPITAL NAME

DPC Veterinary
Hospital

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

REFERRING VET

Loduca

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
