

## PATIENT

Eamon Angus

## SPECIES

Canine

## BREED

Wolf Hound

## SEX

Neutered Male

## AGE

8

## WEIGHT

62

## INTERPRETED BY

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

## IMAGING PERFORMED BY

Dr. Eamon

## HOSPITAL NAME

Belconnen Veterinary  
Centre

## REFERRING VET

Dr. Eamon

## INVOICE

14681

## DATE

03/27/26

## PRESENTING CLINICAL SIGNS

- severe neck pain
- left fore lameness
- nerve reflexes c3t3 localisation

## COMPUTED TOMOGRAPHIC STUDY OF THE SKULL, THORAX AND ABDOMEN

A pre- and post-contrast CT study of the cervical spine in a bone and soft tissue reconstruction is provided for review.

## COMPUTED TOMOGRAPHIC FINDINGS

The osseous and soft tissue structures of the cervical spine and cranial thoracic spine reveal no abnormalities. The dural tube presents the expected diameter and attenuation behavior without pathological contrast enhancement – multifocal mild peripheral mineralization of the dural tube is appreciated. The neuroforamina along the cervical spine are unremarkable.

## COMPUTED TOMOGRAPHIC DIAGNOSIS

- Normal cervical spine

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study reveals no abnormalities that do explain the presenting clinical signs – there is no evidence of extradural myelocompression or neuroforaminal stenosis. If there is strong clinical suspicion for underlying myelopathy, workup can be complemented by a myelographic CT study or MRI study of the spine.

**The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
