DATE

3-30-26

PRESENTING CLINICAL SIGNS

- Has been having diarrhea for the past 4-5 days, last night was very runny and black
- Vomiting up food, had chicken and rice last night and kept that down
- Still very interested in eating and drinking
- Is known for chewing on sticks and pinecones, but usually he doesn't swallow them

Abnormal PE/Chem/CBC/UA Results: PE: Abdomen: Abdomen tense and tender on palpation
Gastrointestinal System: Blood on thermometer in stool Pending lab results

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in three image planes are provided for review.

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and is empty, but a small amount of gas.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

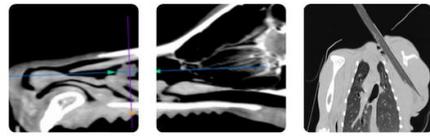

The colon is seen in the expected position and the colon descendens is moderately distended by gas.

RADIOGRAPHIC DIAGNOSIS

- Empty gastrointestinal tract

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study is compatible with enteritis/gastroenteritis. There is no evidence of radiopaque foreign material, abnormal gas pattern or signs for gastrointestinal mechanical obstruction.
