

**PATIENT**

Aura Schoen

**PRESENTING CLINICAL SIGNS**

Jumped off the deck 4 days ago and not weight bearing right hind leg

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE PELVIS AND STIFLE JOINTS**

A complete set of radiographs of the pelvis and the stifle joints is provided for review.

**BREED**

Golden Retriever

The growth plates of the osseous structures are age related open.

**SEX**

Female

The right stifle joint presents with a moderate intracapsular soft tissue swelling as well as a moderate soft tissue swelling cranial and medial to the right tibial crest. The proximal epiphysis of the right tibia and the apophysis of the right tibial crest are mildly widened.

The left stifle joint presents without abnormalities.

**AGE**

4 Months

**RADIOGRAPHIC DIAGNOSIS**

- Right sided apophysiolyis and proximal epiphysiolyis of the tibia with very mild proximal displacement

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The right sided proximal tibial apo- and epiphysiolyis are a plausible explanation for the right hind limb lameness with secondary surrounding soft tissue swelling. Recommend discussing potential surgical treatment options with orthopedic surgeon.
