

PATIENT PRESENTING CLINICAL SIGNS

Sierra Adachi
sudden onset of abdominal pain and reduced appetite
Abnormal PE/Chem/CBC/UA Results: unremarkable

SPECIES RADIOGRAPHIC STUDY OF THE ABDOMEN

Canine
Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

BREED

Dachshund
No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

SEX

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

Female Spayed

The liver is appropriate in position, size and presents uniform opacity.

AGE

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

5 Years

INTERPRETED BY

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and contains a mild to moderate amount of gas.

HOSPITAL NAME

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

St. Catharine's Animal
Hospital

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

REFERRING VET

- Normal abdomen, but mild gas distended stomach

Dr. Boctor

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

The radiographic study of the abdomen presents without abnormalities. Rule out pain originating from the lumbar spine as well. If not done so yet, complementing blood work by cpl is considered beneficial.
