

**PATIENT**

Ada Cowal

**PRESENTING CLINICAL SIGNS**

Vomiting started yesterday, vomited once yesterday and 3 times today. Soft stool started today. Still wants to eat, ate this morning and vomited. Lethargic at home, BAR in the clinic. No history of garbage exposure or diet change.

**SPECIES**

Canine

Abnormal PE/Chem/CBC/UA Results: Blood work unremarkable.

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in three imaging planes are provided for review.

**BREED**

Papillon

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits, the growth plates are age related open. No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

**SEX**

Female

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

**AGE**

17 Weeks

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and contains a small amount of foamy material.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas and foamy material.

**HOSPITAL NAME**

St. Catherine's Animal  
Hospital

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

- Normal abdomen

**REFERRING VET**

Dr. Bekhit

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The mild amount of foamy material throughout the gastrointestinal tract is considered as chymus. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to empirical therapy of possible gastritis, recommend follow up radiographs or a complete abdominal ultrasound examination; in some cases, a high ileus may lack classical radiographic signs of mechanical obstruction.
