

**PATIENT**

Olaf Medrano

**PRESENTING CLINICAL SIGNS**

Reason for Visit: update vaccines History: 4yr intact male. No complaints or issues today. Abnormal PE/Chem/CBC/UA Results: Hydration: Adequate Mentation: BAR EENT: OU clear. AU clear, no debris. No cough on tracheal palpation. Oral cavity: Mild-moderate dental calculus Lymph Nodes: Submandibular, prescapular and popliteal lymph nodes normal size, shape and consistency Skin: Healthy hair coat. No ectoparasites seen. Mild scabbing near tail base (owner reports from Husky pet in household). CV/Respiratory: Normal heart rate and rhythm, no murmur, pulses strong and synchronous, normal bronchovesicular sounds. Abd/GI: Soft, non-painful, no fluid wave, no palpable masses or organomegaly. Uro/Perineum: Intact, both testicles scrotal Musculoskeletal: BCS = 6/9. Ambulatory x 4, normal gait, normal palpation all 4 limbs. Neurological: Alert and appropriate. No deficits noted. Diagnostic Testing Needed: Heartworm panel to Idexx HW4dx - Heartworm positive No microfilaria noted Confirmation lab work sent out---- Testing Performed: HW profile Results: negative for microfilaria/positive for Ag Recommendations: Start doxycycline and prednisone--CBC/chem/thoracic radiographs when owner able

**SPECIES**

Canine

**BREED**

Chihuahua Mix

**SEX**

Male

**RADIOGRAPHIC STUDY OF THE THORAX**

Radiographs of the thorax in two imaging planes are provided for review.

**AGE**

4 Years

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

**HOSPITAL NAME**

DPC Veterinary  
Hospital

**REFERRING VET**

Dr. Oldenhoff

**RADIOGRAPHIC DIAGNOSIS**

- Normal thorax

**INVOICE**

51623

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study is negative for pathology.

**DATE**

4-19-22

**PATIENT**

Olaf Medrano

**SPECIES**

Canine

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

**BREED**

Chihuahua Mix

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
