

PATIENT PRESENTING CLINICAL SIGNS

Lilou Alfonso

SPECIES
Canine

BREED
Toy Poodle

Rechecking: Abdominal pain History: P is a 4yr 2m old SF toy poodle mix presented for a recheck +/- abdominal radiographs. P was directed (03/30) if pain persists, then visit ER. O says they initially went to Urgent Pet Care (03/16) for BW + medications (penicillin inj. and Metronidazole 250mg). Presented 03/30 at DPC for abdominal pain + bloody stool. O says P is always panting and expressing discomfort by being hunched over. Asked if O has palpated abdomen and expressed pain, O says no. As of right now, O says P is uncomfortable/acting like she is in pain, always panting, decreased e/d. P still has a lot of energy and no longer has bloody stool. P is not on prevention. HW (only) test UTD with negative result. C/S/V/D: None E/D/U/D: e/d - decreased; u/d patterns are normal Diet: chicken and rice + sometimes with dry food (BID) Abnormal PE/Chem/CBC/UA Results: Exam Notes: BAR; P tensed up and hunched her back on abd palpation by me with tech holding, but did not have any reaction or tensing at all when mom palpated abdomen; prolonged skin tent - ~5-7% dehydration; no pain on spinal palpation

SEX RADIOGRAPHIC STUDY OF THE ABDOMEN

SF Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.
No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INTERPRETED BY The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

Sebastian Schaub, DVM The liver is appropriate in position, size and presents uniform opacity.

Dr. med. vet. DipECVDI The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

HOSPITAL NAME Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DPC Veterinary Hospital The stomach is in its anticipated position and presents normal content.

REFERRING VET The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

White The colon is seen in the expected position and presents with appropriate content.

INVOICE RADIOGRAPHIC DIAGNOSIS

- Normal abdomen
