

PATIENT PRESENTING CLINICAL SIGNS

Casey Gillis History: pain response when pressure applied on right shoulder joint, mild limping on RF
Abnormal PE/Chem/CBC/UA Results: elevated ALP

SPECIES RADIOGRAPHIC STUDY OF THE RIGHT SHOULDER JOINT

Canine Radiographs of the right shoulder joint in two orthogonal imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

BREED

Pug Mix The mediolateral view of the shoulder joint is moderately rotated.

The right shoulder joint presents smooth osseous margins, and no abnormalities of the surrounding soft tissue structures are appreciated.

SEX

Neutered Male

RADIOGRAPHIC DIAGNOSIS

- Normal right shoulder joint

AGE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

13 Years The radiographic study of the right shoulder joint presents without abnormalities, explaining the right front limb lameness. If there is strong suspicion for pathology of the bicipital tendon or rotator cuff injury, recommend complementing workup by an ultrasound examination of the shoulder joint. Rule out pathology of the brachial plexus or cervical spine as well.
