

PATIENT PRESENTING CLINICAL SIGNS

Dacey Elliot History: losing weight and diarrhea for 2 weeks polydipsia & polyuria

SPECIES

Abnormal PE/Chem/CBC/UA Results: slight hypochloremia slight increased cholesterol & albumin total T4 within range

Feline

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

An overview study including the thorax and abdomen in three imaging planes is provided for review.

BREED

RADIOGRAPHIC FINDINGS

DSH

Thorax

SEX

The surrounding bony structures are within normal limits.

Neutered Male

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

10 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

St. Catharine's AH

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

Both coxofemoral joints present mild to moderate osteophyte new bone formation.

REFERRING VET

Dr. Boctor

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

14919

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

DATE

4/28/22

PATIENT Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.
Dacey Elliot

The stomach is in its anticipated position and presents normal content.

SPECIES The small intestinal loops are of even diameter and non-dilated, a small amount of gas and chymus is seen within the small intestinal loops and considered within normal limits.
Feline

BREED The colon is seen in the expected position and moderately distended by gas and small amount of unformed fecal material.

DSH **RADIOGRAPHIC DIAGNOSIS**

- SEX**
- Gas distended colon with small amount of unformed fecal material
 - Degenerative osteoarthritis coxofemoral joints bilaterally
 - Normal thorax
- Neutered Male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE The gas distended colon and unformed fecal material within the colon are fitting the history of diarrhea and may indicate enteritis. No other cause for the described clinical signs is appreciated. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to empirical therapy, recommend complementing workup by a complete abdominal ultrasound examination to rule out mural changes of the gastrointestinal tract. A fecal exam might be beneficial as well.
