

PATIENT PRESENTING CLINICAL SIGNS

Maya Pinton Cries after eating meals, suspect gastric upset, ulcer etc>?? Has history of hematemesis. Responds to cerenia and sucralfate. currently on Gastrointestinal diet...
Abnormal PE/Chem/CBC/UA Results: Pending

SPECIES RADIOGRAPHIC STUDY OF THE ABDOMEN

Canine A right lateral view of the abdomen is provided for review.

RADIOGRAPHIC FINDINGS

BREED The vertebral endplates L2/L3 present mild spondylosis formation.

Chihuahua No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.
The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

SEX The hepatic volume is mildly enlarged.

Female/sp The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

AGE Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.
15 Years

INTERPRETED BY The stomach is in its anticipated position and presents normal content.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

HOSPITAL NAME RADIOGRAPHIC DIAGNOSIS

New Bridge
Veterinary Practice

- Mild hepatomegaly
- Mild spondylosis deformans L2/L3

REFERRING VET INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Dr. Abina Glennon

The radiographic study presents without abnormalities, explaining the described clinical signs. However, a negative radiographic study does not rule out gastric ulcer or mural gastric mass. Workup might be complemented by an abdominal ultrasound or gastroscopy.

INVOICE Potentials for the hepatomegaly include metabolic hepatic disease/steroid induced hepatopathy, hepatitis or neoplastic infiltration. Ultrasound including FNA sampling can be used as minimally advanced diagnostic tests.
