

PATIENT PRESENTING CLINICAL SIGNS

Sterling Randa Jodi came home today and Sterling was slow to get up and was walking slow with her head hanging low. She then went and layed down and her whole body was shaking for about 2 minutes, stopped and then started again. She didn't want to get up from her sun spot to lay in the bathroom like normal. Yesterday she was mostly normal just a little less energetic on their walk. Jodi said it looked like she might want to throw up. Walking her into the clinic she was limping bad on her right hind and seems sore to the touch. Sterling plays hard with the housemate. She is also drooling.

SPECIES

Canine

BREED

Labrador Retriever

Abnormal PE/Chem/CBC/UA Results: Abdomen: GUARDED, no masses, no organomegaly. Rectal examination not performed. Musculoskeletal: GUARDED IN BACK. RIGHT HIND LAME, 3/5 TENDER AND WARM LUMBAR SPINE. Limb palpation is normal. GREAT ROM SAVE HIPs- A BIT RELUCTANT TO FULL EXTENSION. ILIOPSOAS AREA COMFORTABLE. No loss of proprioception.

RADIOGRAPHIC STUDY OF THE THORAC & LUMBAR SPINE, ABDOMEN AND PELVIS

A complete set of radiographs of the spine, abdomen and the pelvis is provided for review.

SEX

FS

RADIOGRAPHIC FINDINGS

Spine & Pelvis

AGE

5 Years, 2 Months

The osseous and surrounding soft tissue structures of the pictured caudal part of the thoracic spine and the entire lumbar spine present no abnormalities.

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

INTERPRETED BY

Abdomen

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

HOSPITAL NAME

Elizabeth Animal
Hospital

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

REFERRING VET

Leon Anderson, DVM

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

INVOICE

57582

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.
