

**PATIENT**

Franklin Goering

**PRESENTING CLINICAL SIGNS**

diarrhea for 3 month  
Abnormal PE/Chem/CBC/UA Results: unremarkable

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN**

An overview study including the thorax and abdomen in three imaging planes is provided for review.

**BREED**

DLH

**RADIOGRAPHIC FINDINGS**

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

**SEX**

Male Neuter

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**AGE**

12 Years

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**HOSPITAL NAME**

St. Catherine's Animal  
Hospital

Abdomen

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

**REFERRING VET**

Dr. Boctor

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

**INVOICE**

51837

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**DATE**

4-30-22

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and is empty but a small amount of foamy unformed soft tissue material.

**PATIENT**

Franklin Goering

**RADIOGRAPHIC DIAGNOSIS**

- Mild amount of unformed fecal material in colon
- Normal thorax

**SPECIES**

Feline

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study presents without abnormalities, explaining the history of diarrhea. If no done so yet, considered complementing blood work by fpl to rule out pancreatitis. An abdominal ultrasound examination can be used to check for mural changes of the gastrointestinal tract.
