

PATIENT PRESENTING CLINICAL SIGNS

Dusan Prole History: PD , reduced appetite
Abnormal PE/Chem/CBC/UA Results: unremarkable

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Feline An overview study including the thorax and abdomen in three imaging planes is provided for review.

RADIOGRAPHIC FINDINGS

BREED

Thorax

DLH

The surrounding bony structures are within normal limits.

SEX

The extrathoracic soft tissues present homogeneous without abnormalities.

Neutered Male

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

12 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

St. Catharine's AH

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

REFERRING VET

Dr. Boctor

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

21886

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

DATE

PATIENT Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Dusan Prole

The stomach is in its anticipated position and presents normal content.

SPECIES

Feline

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

BREED

DLH

The colon is seen in the expected position and is moderately distended by gas and unformed fecal material.

RADIOGRAPHIC DIAGNOSIS

SEX

- Gas distended colon and unformed fecal material in colon
- Normal thorax

Neutered Male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

12 Years

The pattern of the colon is suggestive for enteritis/colitis. No additional abnormalities are appreciated, explaining the current onset of hyporexia. If not done so yet, recommend complementing workup by blood work including fpl to rule out pancreatitis, hepatitis, etc.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

HOSPITAL NAME

St. Catharine's AH

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

REFERRING VET

Dr. Boctor

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
