

PATIENT PRESENTING CLINICAL SIGNS

Nugget Falconer History: Vomiting for 4 weeks(3-4 times / week) Peeing outside litter box red urine
Abnormal PE/Chem/CBC/UA Results: Pending UA results , High BUN 13 .4(high end 11.4)

SPECIES RADIOGRAPHIC STUDY OF THE ABDOMEN

Feline Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

BREED

DSH The surrounding bony structures are within normal limits.

DSH

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

SEX

Spayed Female The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

8 Years

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. At least 15 mineral opaque, irregular formed calculi, measuring up to 3 mm in size are superimposed on the imaging plane of the urinary bladder.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The stomach is in its anticipated position and presents normal content.

HOSPITAL NAME

St. Catharines AH

The small intestinal loops are of even diameter and non-dilated, a small amount of granular mineralized material is seen throughout the small intestinal loops.

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

REFERRING VET

- Cystolithiasis
- Small amount of mineralized material throughout the small intestinal loops

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

14616

Potentials for the cystolithiasis include struvite or calcium oxalate. Chronic irritation of the urinary bladder wall and the calculi forming a potential infectious nidus can explain cystitis. Recommend complementing workup by complete urinalysis. Surgical management of the urinary calculi is a potential treatment option.
