

PATIENT

PRESENTING CLINICAL SIGNS

Betty Crocker Lihou

Drinking more than usual and lethargic
Abnormal PE/Chem/CBC/UA Results: High end bun and creatine otherwise unremarkable

SPECIES

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Feline

An overview study including the thorax and abdomen in three imaging planes is provided for review.

BREED

RADIOGRAPHIC FINDINGS

Domestic Shorthair

Thorax

Multifocal mild spondylosis formation is seen along the thoracic & lumbar spine.

SEX

The extrathoracic soft tissues present homogeneous without abnormalities.

Female Spayed

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

11 Years

INTERPRETED BY

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

St. Catherine's Animal
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET

Abdomen

Dr. Mena

Both coxofemoral joints present moderate osteophyte new bone formation. The acetabular groove bilaterally is shallow

INVOICE

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

51396

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

4-7-22

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary

PATIENT

bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Betty Crocker Lihou

The stomach is in its anticipated position and presents normal content.

SPECIES

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Feline

The colon is seen in the expected position and presents with appropriate content.

BREED

RADIOGRAPHIC DIAGNOSIS

Domestic Shorthair

- Degenerative osteoarthritis coxofemoral joints bilaterally, due to hip dysplasia
- Spondylosis deformans

SEX

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Female Spayed

The radiographic study of the thorax and abdomen presents without clinically relevant pathology.

AGE

11 Years

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

HOSPITAL NAME

St. Catherine's Animal
Hospital

REFERRING VET

Dr. Mena

INVOICE

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

51396

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
