RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

BREED

A complete set of radiographs of the thorax and abdomen is provided for review.

Domestic Short Hair

RADIOGRAPHIC FINDINGS

SEX

Thorax

The surrounding bony structures are within normal limits.

MN

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

11 Years

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. In the VD projection a redundant aortic arch is appreciated with left lateral bulging of the aortic arch. The pulmonary vasculature is within normal limits.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

Animal Paradise
Hospital

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET

Dr. Elshafie

Abdomen

The surrounding bony structures are within normal limits.

INVOICE

51385

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

Due to the lack of peritoneal fat, the serosal abdominal detail is lost, and the margins of the parenchymal abdominal organs are effaced.

DATE

4-7-22

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

PATIENT

The colon is seen in the expected position and presents with appropriate content.

Stewie Krochalk

RADIOGRAPHIC DIAGNOSIS

SPECIES

Feline

- Lean body condition
- Secondary loss of abdominal detail due to lack of peritoneal fat
- Redundant aortic arch, incidental
- Otherwise normal thorax

BREED

Domestic Short Hair

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents no specific abnormality, explaining the weight loss. However, evaluation of the abdomen is limited by the lack of peritoneal fat. Recommend complementing workup by an ultrasound examination of the abdomen.
