

**PATIENT PRESENTING CLINICAL SIGNS**

**Jake Williams** History: Pet presented today for a dental cleaning. Pet presented with chemical exposure last summer, despite having normal liver values pet continues to have mild uveitis with corneal edema and haze, no history of ulceration. Please include a dental evaluation as well in the interpretation of pets head.

**SPECIES**

Canine **COMPUTED TOMOGRAPHIC STUDY OF THE SKULL**

A high-resolution plain CT study of the skull is provided for review.

**BREED**

Dachshund

**COMPUTED TOMOGRAPHIC FINDINGS**

Triadan 101, 102, 201, 301-303, 311, 401-403 are absent. The periodontal space of triadan 104, 204, 304 and 308 is moderately widened. The distal root of triadan 308 presents resorptive lesions. The distal root of triadan 108 presents resorptive lesions and ankylosis of the root.

**SEX**

Neutered Male

The nasal cavity presents the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining.

**AGE**

11 Years

The retrobulbar area bilaterally is unremarkable.

A shallow cutaneous wart-like lesion is appreciated at the rostradorsal aspect of the nose.

**INTERPRETED BY**

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

**HOSPITAL NAME**

The brain is symmetric.

Cranberry Holistic PC

The submandibular lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation pattern is uniform.

**REFERRING VET**

**COMPUTED TOMOGRAPHIC DIAGNOSIS**

Cynthia Maro

- Periodontal disease 104, 204, 304 and 308
- Tooth root resorption 308
- Ankylosis distal root 108
- Absent triadan 101, 102, 201, 301-303, 311, 401-403
- Small cutaneous wart like lesion dorsal aspect of the nose

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**DATE**

4/7/23

**PATIENT**

Jake Williams

The CT study presents evidence of periodontal disease of multiple teeth. No additional abnormalities are appreciated, the retrobulbar area bilaterally presents no abnormalities and no abnormalities of the ocular bulbs are appreciated. Be aware that evaluation of the soft tissue structures of the skull is limited in plain CT series.
