

**PATIENT**

Bella Larue

**PRESENTING CLINICAL SIGNS**

Purebred Persian female, unspayed. Presented 4/8/22 Vomiting once a day brown liquid past couple of wks. Sneezing. T 104.6 Firm mid-abd mass Fleas Cat had always eaten a lot BS 4 Abnormal PE/Chem/CBC/UA Results: CS/CBC/UA/Fecal pending

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in two imaging planes are provided for review.

**BREED**

Persian

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

**SEX**

Female

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

**AGE**

10 Months

The hepatic volume is mild to moderately increased the liver is protruding beyond the costal arch; the gastric axis is deviated caudally. The caudoventral hepatic margins are rounded.

The splenic head is in the anticipated position and within normal limits for size and opacity.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**HOSPITAL NAME**

Blandford Animal  
Hospital

The small intestinal loops are of even diameter and non-dilated, a small amount of gas and chymus is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**REFERRING VET**

Hazel Holman

**RADIOGRAPHIC DIAGNOSIS**

- Mild hepatomegaly

**INVOICE**

51417

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The hepatomegaly might still be a normal age related finding. Rule out metabolic hepatic disease, hepatitis or diffuse neoplastic infiltration.

**DATE**

4-8-22

No abdominal mass is appreciated in the radiographic study. Consider complementing workup by a complete ultrasound examination of the abdomen as jejunal lymphadenopathy or intestinal mass might be missed by radiography.
