**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in two imaging planes are provided for review.

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

1 Year, 4 Months

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

**INTERPRETED BY**

Sebastian Schaub, DVM  
 Dr. med. vet. DipECVDI

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

**HOSPITAL NAME**

DPC Veterinary Hospital

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**REFERRING VET**

Dr. White

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**INVOICE**

52154

**RADIOGRAPHIC DIAGNOSIS**

- Normal abdomen
- No evidence of mineral opaque urinary calculi.

**DATE**

5-28-22

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the abdomen is negative for pathology. A complete urinalysis as already been performed, regarding the history, for further evaluation of the presenting urinary clinical signs. An abdominal ultrasound examination might be beneficial for further assessment of the urinary tract as well.
