COMPUTED TOMOGRAPHIC FINDINGS

BREED
Pit Bull Mix The osseous and surrounding soft tissue structures of the right shoulder joint present without abnormalities.

COMPUTED TOMOGRAPHIC DIAGNOSIS

SEX • Structural normal right shoulder joint

FS

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE
4 Years, 4 Months The CT study of the right shoulder joint presents without macromorphological abnormalities, explaining the right front limb lameness. In case of strong clinical suspicion for pathology of the bicipital tendon or rotator cuff injury, recommend complementing workup by an ultrasound examination or MRI study of the shoulder joint.
