

PATIENT

Lila Holman

PRESENTING CLINICAL SIGNS

sudden episode shaking and trembling
Abnormal PE/Chem/CBC/UA Results: elevated cPLI

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORACIC&LUMBAR SPINE AND ABDOMEN

A complete set of radiographs of the abdomen and thoracic & lumbar spine is provided for review.

BREED

Terrier Yorkshire Mix

RADIOGRAPHIC FINDINGS

Spine

The intervertebral disc space T10/T11 is narrowed.

The remainder of the osseous and soft tissue structures of the thoracic and lumbar spine present without abnormalities.

SEX

Female Spayed

Abdomen

The surrounding bony structures are within normal limits.

AGE

6 Years

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

HOSPITAL NAME

St. Catherine's Animal
Hospital

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

REFERRING VET

Dr. Boctor

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

INVOICE

51929

- Possible discopathy T10/T11
- Normal abdomen

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE

5-4-22

Regarding the history, elevated cpl is suggestive for pancreatitis which is a plausible source for pain.

The narrowed intervertebral disc space T10/T11 can indicate discopathy that might or might not be associated with compressive myelopathy, a differential at this location is physiological

PATIENT

Lila Holman

narrowing of the intervertebral disc space due to anticlinal vertebra. If clinical signs are refractory to management of pancreatitis and/or neurological deficits develop, cross-sectional imaging is recommended for further workup.
