

PATIENT PRESENTING CLINICAL SIGNS

Brutus Kurtz Friday vomit and diarrhea yesterday P has not been wanting to eat P ate a bunch of grass seemed to be in discomfort strained to go to the bathroom O: BAR, m.m-pink, CRT<2sec, EENT, H/L, Abdo, U/G, skin and coat A: Gastroenteritis R/O pancreatitis vs F.B vs others

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine A complete set of radiographs of the thorax and abdomen is provided for review.

BREED RADIOGRAPHIC FINDINGS

Pit Bull Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

MN

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

14 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

Level with the 8th left intercostal space, a well-defined roundish soft tissue opaque nodule, measuring 2 cm in diameter is seen in the lateral aspect of the left caudal lung lobe. Multifocal punctuate mineralization of the lung parenchyma is noted.

HOSPITAL NAME

Animal Paradise
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

Multifocal moderate spondylosis formation is seen along the lumbar spine.

REFERRING VET

Dr. Elshafie

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

51948

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

DATE

5-5-22

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and is empty.

PATIENT

Brutus Kurtz

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Canine

- Solitary pulmonary soft tissue nodule left caudal lung lobe
- Empty stomach
- Pulmonary osteomas
- Spondylosis deformans

BREED

Pit Bull

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the shows no abnormality, explaining the presenting clinical signs. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If not done so yet, recommend complete blood work including cpl to check for underlying pancreatitis.

SEX

MN

Differentials for the solitary pulmonary nodule in the left caudal lung lobe include granuloma, fibrosis, cyst, round pneumonia or primary/secondary neoplasia. Ultrasound guided FNA sampling by the 8th left intercostal space can be tried for further definition. An abdominal ultrasound exam appears beneficial to rule out neoplastic transformation of the parenchymal organs, not appreciated by radiography.
