

PATIENT PRESENTING CLINICAL SIGNS

Raylan Tindal History: Abdominal CT due to ongoing VPCs. Normal echocardiogram. Normal bloodwork April 2.
History of adrenalectomy (adenoma) Jan 27/22.
Abnormal PE/Chem/CBC/UA Results:

SPECIES

Canine

COMPUTED TOMOGRAPHIC STUDY OF THE ABDOMEN

A pre- and post-contrast CT study of the abdomen in a bone and soft tissue reconstruction is provided for review.

BREED

Shepherd Mix

COMPUTED TOMOGRAPHIC FINDINGS

The serosal fat presents normal attenuation behavior. There is no evidence of peritoneal effusion or peritonitis.

SEX

Neutered Male

Both kidneys present within normal limits for size, shape and organ architecture. After contrast administration a bilaterally symmetric and uniform nephro- and pyelogram is noted.

AGE

11 Years 4 Months

The left adrenal gland is within normal limits for size, shape and organ architecture. The right adrenal gland is absent, and a metal attenuating surgical vascular clip is seen at the same level.

Both liver and spleen present with normal shape, even surface, uniformly attenuating parenchyma and homogeneous contrast enhancement, unremarkable.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The portal vein presents a normal order of its tributary veins and intrahepatic branching. No abnormal vessel is noted inside and outside of the liver parenchyma.

The pancreas is evenly contoured, the pancreatic parenchyma is homogeneous and presents uniform contrast enhancement.

HOSPITAL NAME

Animal Health
Partners

The position, delineation, wall and content of the gastrointestinal tract are considered within normal limits throughout.

Multiple intervertebral discs of the lumbar spine are mildly protruding into the vertebral canal, mild distorting the ventral epidural space at the same level. The vertebral endplates of the lumbosacral junction present moderate spondylosis formation.

REFERRING VET

Dr. Debbie Reynolds

COMPUTED TOMOGRAPHIC DIAGNOSIS

INVOICE

15082

- History of right sided adrenalectomy
- Multifocal mild intervertebral disc protrusions along the lumbar spine without evidence of compressive myelopathy
- Spondylosis deformans lumbosacral junction

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE

5/5/22

PATIENT

Raylan Tindal

The CT study of the abdomen is negative for pathology, there is no evidence of an abdominal mass or other clinically relevant pathology.

SPECIES

Canine

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

BREED

Shepherd Mix

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
