

**PATIENT**

Hemingway Hinds

**PRESENTING CLINICAL SIGNS**

P has had a history of chronic diarrhea w/ increasing vomiting, P is otherwise e/d/u WNL at home. Diarrhea has improved with use of metronidazole in the past, but returns shortly after completion of the course.

**SPECIES**

Feline

Abnormal PE/Chem/CBC/UA Results: Plaques/ulcer development beginning on the buccal tissue CBC/T4/CHEM pending

**BREED**

Maine Coon

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in two imaging planes are provided for review.

**SEX**

Male Neutered

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits, the growth plates are open – the open growth plates are indicating immaturity of the patient and are contrary to the given age of 8a.

**AGE**

8.7 Years

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

**INTERPRETED BY**

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**HOSPITAL NAME**

Boca Park Animal  
Hospital

The small intestinal loops are of even diameter and non-dilated and contain a mild to moderate amount of chymus.

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

**REFERRING VET**

Tifanie Silver

- Normal abdomen with moderate amount of chymus throughout the gastrointestinal tract

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**INVOICE**

51962

The radiographic study presents without abnormalities, explaining the presenting clinical signs. Complementing workup by an abdominal ultrasound examination will allow evaluation of the wall layering of the gastrointestinal tract to screen for diffuse changes (e.g. chronic inflammatory, neoplastic).

**DATE**

5-6-22

Recheck the age of the patient, due to immaturity of the skeletal structures.

**PATIENT**

Hemingway Hinds

**SPECIES**

Feline

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

**BREED**

Maine Coon

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.

**SEX**

Male Neutered
