

PATIENT PRESENTING CLINICAL SIGNS

Lucky Sato History: O called and said pet is scheduled for surgery OVH only for next week, but now pet is having discharge from nipples

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine A complete set of radiographs of the thorax and abdomen is provided for review.

RADIOGRAPHIC FINDINGS

BREED

Papillon

Thorax

The surrounding bony structures are within normal limits.

SEX

The extrathoracic soft tissues present homogeneous without abnormalities.

Spayed Female

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

13 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Animal Paradise
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

Multifocal moderate spondylosis formation is seen along the lumbar spine.

REFERRING VET

Dr. Elshafie

Small mineralization is seen in the right inguinal region.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

INVOICE

15108

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

DATE

5/6/22

PATIENT

Lucky Sato The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

SPECIES

Canine

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

BREED

Papillon

A tubular soft tissue structure is superimposed on the cranial pole of the urinary bladder in the lateral projection, bending caudally between the colon and urinary bladder.

SEX

Spayed Female

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

AGE

13 Years

- Suspect prominent uterus
- Dystrophic mineralization subcutaneous tissue right inguinal region - stationary
- No evidence of pulmonary metastatic disease

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The uterus appears to be mildly enlarged – correlate with estrous cycle, differentials include mild uterine filling (e.g., hydro-, hemo-, muco-, pyometra). Ovariohysterectomy has already been scheduled.
