

**PATIENT PRESENTING CLINICAL SIGNS**

Blu Young Reason for Visit: Vomiting History: P has been vomiting undigested food about 2-4 hours after eating. Yesterday O gave breakfast to Blu around 7am and at 9am he vomited almost everything he ate. This happened again last night and this morning. Before yesterday P hasn't had any episodes like this, however O said that for the past couple weeks P has been coughing followed with yellowish foam. O is still feeding freshpet and uses maze bowls to slow down when P eats. P still has good appetite and no diarrhea. O also mentioned that P is very itchy on his paws, specially the front ones. He has been licking a lot. O started to give apoquel again

**SPECIES** Canine

**BREED** Border Collie

Abnormal PE/Chem/CBC/UA Results: Hydration: 4-6% dehydrated Mentation: depressed EENT: N Oral Cavity: mm pink tacky crt 1-2 sec Lymph Nodes: N Skin: N CV/Respiratory: N Abd/GI: tense cranial abdomen, no palpable masses or FB Unable to do rectal exam Uro/Perineum: N Musculoskeletal: N Neurological: N CBC/Chem/CPL CBC/CHEM-WNL CPL-ABNORMAL

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

**SEX** Radiographs of the abdomen in two imaging planes are provided for review

**NM RADIOGRAPHIC FINDINGS**

T13 presents with a broad based right rib, fused to the respective vertebral body.

**AGE** No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

7 Years, 8 Months

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

**INTERPRETED BY**

The liver is appropriate in position, size and presents uniform opacity.

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

**HOSPITAL NAME**

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DPC Veterinary  
Hospital

The stomach is in its anticipated position and presents normal content.

**REFERRING VET**

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Dr. Feldt

The colon is seen in the expected position and presents with appropriate content.

**RADIOGRAPHIC DIAGNOSIS**

- Normal abdomen

**INVOICE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

51965

The radiographic study of the abdomen presents without abnormalities. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. The abnormal cpl is indicating underlying pancreatitis. If clinical signs are refractory to empirical therapy, recommend follow up radiographs or a complete abdominal ultrasound examination.
