**RADIOGRAPHIC STUDY OF THE THORAX**

Radiographs of the thorax in two imaging planes are provided for review.

**SEX**

**RADIOGRAPHIC FINDINGS**

**SF**

The surrounding bony structures are within normal limits.

**AGE**

The extrathoracic soft tissues present homogeneous without abnormalities.

**9 Years**

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**INTERPRETED BY**

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

**HOSPITAL NAME**

DPC Veterinary Hospital

In the VD view, level with the 6<sup>th</sup> right rib, a small region with moderate ground glass opacification is seen. The remainder of the lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**REFERRING VET**

Dr. White

**RADIOGRAPHIC DIAGNOSIS**

- Small region with unstructured interstitial pattern right caudal lung lobe

**INVOICE**

51972

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The small region of interstitial pattern can present a zone with pneumonitis – possibly secondary to upper airway infection. Dystelectasis is a plausible differential as well.
