

PATIENT PRESENTING CLINICAL SIGNS

Jill Borghi Vomiting bile, anorexia, lethargy and diarrhea with mucus for the past 4 days.
 Abnormal PE/Chem/CBC/UA Results: PE showed dehydration; CBC/Chem pending. UA: UPC 2.5 (3+ proteinuria) and USG 1.025, all else WNL (inc UPC persists from hx of leptospirosis and renal disease 3 yrs ago).

SPECIES

Canine **RADIOGRAPHIC STUDY OF THE ABDOMEN**

Radiographs of the abdomen in three imaging planes are provided for review.

BREED RADIOGRAPHIC FINDINGS

Boston Terrier The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

SEX

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

Female Spayed

The liver is appropriate in position, size and presents uniform opacity.

AGE

7 Years, 7 Months

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

INTERPRETED BY

The stomach is in its anticipated position and is empty.

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

HOSPITAL NAME

The colon contains a small amount of gas, the remainder of the colon are collapsed.

Northvale Veterinary
 Clinic

RADIOGRAPHIC DIAGNOSIS

- Empty gastrointestinal tract

REFERRING VET

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Dr. Stefanie Simon

The overall empty gastrointestinal tract – including the colon – in combination with the presenting clinical signs is suggestive for gastroenteritis – e.g. due to dietary indiscretion, parasitic infection, dysbacteriosis, pancreatitis. There is no evidence of radiopaque foreign material, abnormal gas pattern or signs for gastrointestinal mechanical obstruction. If not done so yet, recommend complementing workup by complete blood work.
