

**PATIENT PRESENTING CLINICAL SIGNS**

Olie Otis/Finlay Noted to be limping over Easter weekend (April 8-9th) but seemed to resolve without treatment Brought in on April 19th due to lameness on the right front with open wound present over the right shoulder blade. Suspected cat bite wound as cat is indoor/outdoor Was treated with convenia and wound appears to have healed but lameness has not improved and continues to walk with overt limp Difficult to examine well without sedation Was sedated last week and very painful over shoulder bone and with extension of the shoulder joint  
Feline Abnormal PE/Chem/CBC/UA Results: Bloodwork has been declined Painful on the right front on palpation of shoulder joint and with extension of the right shoulder

**BREED RADIOGRAPHIC STUDY OF THE SHOULDER JOINTS**

DSH A complete set of radiographs of the shoulder joints is provided for review.

**RADIOGRAPHIC FINDINGS**

SEX Both shoulder joints present smooth osseous margins and the surrounding soft tissue structures are within normal limits.  
Male

**RADIOGRAPHIC DIAGNOSIS**

AGE • Normal shoulder joints

13

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**INTERPRETED BY**

The radiographic study of the shoulder joints reveals no abnormality, explaining the right front limb lameness.
