

**PATIENT PRESENTING CLINICAL SIGNS**

Rolly Sheehan excessive panting, coughing  
Abnormal PE/Chem/CBC/UA Results: elevated ALT, ALP

**SPECIES RADIOGRAPHIC STUDY OF THE NECK & THORAX**

Canine An overview study including the thorax and abdomen in two imaging planes is provided for review.

**RADIOGRAPHIC FINDINGS**

**BREED** Parts of the neck are cropped by the field of view. The included parts osseous and soft tissue structures of the neck are within normal limits.

Pug The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

**SEX** The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

Male Neuter

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**AGE**

14 Years

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

**INTERPRETED BY**

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**RADIOGRAPHIC DIAGNOSIS**

**HOSPITAL NAME**

- Normal thorax
- Normal neck

St. Catherine's Animal  
Hospital

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**REFERRING VET**

The radiographic study presents without abnormalities, explaining the cough. However, a negative radiographic study does not rule out potential underlying tracheitis/bronchitis.
