

PATIENT PRESENTING CLINICAL SIGNS

Lottie Grant Waxing and waning stiff gate chronically. Recently will sit down on her walks and refuse to go further, but still able to chase the ball for a long time. No overt lameness or favoring per O. No lameness or gait abnormalities on PE.

SPECIES Abnormal PE/Chem/CBC/UA Results: Pain on palpation of right elbow when pressure applied medially and laterally, possible resistance to extension. Does not resist extension. Normal range of motion.
Canine

RADIOGRAPHIC STUDY OF THE ELBOW JOINTS

BREED A complete set of radiographs of the elbow joints is provided for review.

Corgi **RADIOGRAPHIC FINDINGS**

The osseous structures have a breed specific chondrodystrophic conformation.

SEX Both elbow joints present smooth osseous margins. The joint space is congruent. The soft tissue structures surrounding the elbow joints are unremarkable.
Spayed Female

RADIOGRAPHIC DIAGNOSIS

AGE • Normal elbow joints

2 Years **INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

INTERPRETED BY The radiographic study of the elbow joints presents without abnormalities.
