

**PATIENT PRESENTING CLINICAL SIGNS**

Max Saldia Right epistaxis

COMPUTED TOMOGRAPHY OF THE SKULL**SPECIES** A high resolution pre- and post-contrast CT study of the skull is provided for review.Canine **COMPUTED TOMOGRAPHIC FINDINGS**

In the last post contrast scan, multiple tubular structures are noted throughout the esophagus, oro- and nasopharynx – due to vomiting under general anesthesia.

BREED

Golden Retriever

The pictured parts of the dentition are complete and unremarkable in all jaw quadrants.

In the caudal aspect of the right nasal cavity, focal destruction of the conchal structures is appreciated. The remainder of the nasal cavity present the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining.

SEX

Intact Male

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

AGE

12 Years

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

The brain presents no deviation from normal anatomy and symmetry. The brain parenchyma is homogeneous and within normal limits for attenuation and distribution of contrast enhancement. The ventricular system is non-dilated and symmetric.

INTERPRETED BYSebastian Schaub, DVM
Dr. med. vet. DipECVDI

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation and contrast enhancement pattern is uniform.

COMPUTED TOMOGRAPHIC DIAGNOSIS**HOSPITAL NAME**

Mobile Pet Imaging

- Focal turbinate destruction right nasal cavity

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**REFERRING VET**

Meaux

The focal destruction of the nasal turbinates is suggestive for underlying non-specific rhinitis (e.g. lymphocytic plasmocytic) or preceding local inflammation/foreign body. Theoretically early stage of mycotic rhinitis is a potential as well. Rhinoscopy including biopsy can be used as advanced diagnostic tool.
