

PATIENT PRESENTING CLINICAL SIGNS

Charlie Luciano Distended Abdomen Panting Still eating & drinking No V/D
 Abnormal PE/Chem/CBC/UA Results: PE - No pain on abdominal palpation Bloodwork not done

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine An overview study including the thorax and abdomen in three imaging planes is provided for review.

BREED RADIOGRAPHIC FINDINGS

Havanese Thorax

The surrounding bony structures are within normal limits.

SEX The extrathoracic soft tissues present homogeneous without abnormalities.

Male Neuter The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

10 Years The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.
 Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.
 St. Catherine's Animal Hospital

Abdomen

The surrounding bony structures are within normal limits.

REFERRING VET No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.
 Dr. Jui Gokhale

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE The liver is appropriate in position, size and presents uniform opacity.

52464 The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

DATE Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

6-14-22 The stomach is in its anticipated position and presents normal content.

PATIENT

Charlie Luciano

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Canine

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen

BREED

Havanese

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen presents without abnormalities. Consider complementing workup by complete blood work.

SEX

Male Neuter

AGE

10 Years

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

HOSPITAL NAME

St. Catherine's Animal
Hospital

REFERRING VET

Dr. Jui Gokhale

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

INVOICE

52464

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
