

PATIENT PRESENTING CLINICAL SIGNS

Bijou Christie Chronic limp in RF limb. Mild pain on manipulation of elbow.

RADIOGRAPHIC STUDY OF THE RIGHT FRONT LIMB

SPECIES A complete set of radiographs of the entire right front limb is provided for review.

Canine **RADIOGRAPHIC FINDINGS**

The osseous and surrounding soft tissue structures of the right shoulder joint are within normal limits.

BREED The periarticular bones of the right elbow joint present mild osteophyte new bone formation. The contour of the medial coronoid process of the left elbow joint has a mild blurred cranial tip.

Poodle

No abnormalities of the osseous and surrounding soft tissue structures of the right carpal joint are appreciated.

SEX

Female

The abaxial sesamoid bone of the metacarpophalangeal joint of the second phalanx of the right and left front paw and the axial sesamoid bone of the metacarpophalangeal joint of the fifth phalanx are bipartite..

RADIOGRAPHIC DIAGNOSIS

AGE

9

- Mild degenerative osteoarthritis right elbow joint
- Possible coronoid disease right elbow joint
- Bipartite sesamoid bones metacarpophalangeal joints front paws bilaterally - see description
- Normal right shoulder joint
- Normal carpal joint bilaterally

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

HOSPITAL NAME

East Bend Animal
Hospital

The radiographic changes of the right elbow joint are concerning for underlying elbow dysplasia and secondary degenerative joint disease. A CT study of the elbow joints can be considered for further workup.

The appreciated bipartite sesamoid bones of the metacarpophalangeal joints can be a source for lameness in few cases as well.
