

PATIENT PRESENTING CLINICAL SIGNS

Thor Puno
History: Owner reports febrile 104.7 not feeling well...
Abnormal PE/Chem/CBC/UA Results: All pending

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine
Radiographs of the thorax and abdomen in a right lateral projection are provided for review.

BREED RADIOGRAPHIC FINDINGS

Labrador Retriever

Thorax

The vertebral endplates T10/T11 present mild spondylosis formation.

SEX

Neutered Male

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

11 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

HOSPITAL NAME

New Bridge VP

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

REFERRING VET

Dr. Abina Glennon

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

16144

The splenic body and tail are considered normal for position, size, shape and opacity.

DATE

6/16/22

PATIENT

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Thor Puno

The stomach is in its anticipated position and presents normal content.

SPECIES

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Canine

The colon is seen in the expected position and presents with appropriate content.

BREED

RADIOGRAPHIC DIAGNOSIS

Labrador Retriever

- Normal thorax, but mild spondylosis formation
- Normal abdomen

SEX

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Neutered Male

The radiographic study of the thorax and abdomen presents without clinically relevant abnormalities.

AGE

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

11 Years

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
