75559

DATE

6-16-26

PRESENTING CLINICAL SIGNS

Limping on right hind for a few months, worse within the past couple of weeks.

Abnormal PE/Chem/CBC/UA Results: Musculoskeletal: Short step on right hind at times, very uncomfortable on palpation of pelvis and caudal spine discomfort and reaction to palpation of pelvis and caudal spine, range of motion pretty normal, toes and hock feel fine, range of motion on pelvis good.

RADIOGRAPHIC STUDY OF THE PELVIS AND STIFLE JOINTS

A complete set of radiographs of the pelvis and stifle joints is provided for review.

RADIOGRAPHIC FINDINGS

The osseous and surrounding soft tissue structures of the pelvis are within normal limits. Both coxofemoral joints present smooth osseous margins and congruent joint spaces.

Both stifle joints present smooth margins of the periarticular bones and no evidence of an intracapsular soft tissue swelling. The patella of both stifle joints is in situ.

RADIOGRAPHIC DIAGNOSIS

- Normal pelvis and coxofemoral joints
- Normal stifle joints

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the pelvis and stifle joints reveals no abnormalities and an underlying cause for the presenting clinical signs cannot be specified.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
