RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

BREED

A complete set of radiographs of the thorax & abdomen is provided for review.

DSH

RADIOGRAPHIC FINDINGS

Thorax

SEX

The surrounding bony structures are within normal limits.

FS

The extrathoracic soft tissues present homogeneous without abnormalities.

AGE

13

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Animal Paradise
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

The surrounding bony structures are within normal limits.

REFERRING VET

Dr. Hellwarth

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space. A metal opaque clip is seen in the right and left lateral abdomen, caudal to the kidneys – preceding spaying.

The liver is appropriate in position, size and presents uniform opacity.

INVOICE

58944

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

DATE

6-20-23

The stomach is in its anticipated position and presents normal content.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

PATIENT The colon is seen in the expected position and presents with appropriate content.

D Park

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

BREED

DSH

The radiographic study presents without abnormalities. An underlying cause for the chronic vomiting is not appreciated. Complementing workup by an abdominal ultrasound examination will allow further assessment of the mural lining of the gastrointestinal tract to screen for chronic inflammatory or neoplastic changes.
